Slatz® Sign System

The System

Whether they coordinate with a comprehensive wayfinding system that begins outside a building, or they are the first signs that greet people for an individual department or business inside a complex, the Slatz ® Sign System provides versatile and adaptable solutions for interior communications.

Using the same basic building blocks of universal clips and end caps, along with faceplates in a variety of sizes and finishes, you can create a coordinated sign program that works on its own or can be interfaced with other sign products.

Identify destination areas and departments on a centralized, wall-mounted directory (A) available in single and multi-column configurations. Reinforce the directions with wall-mounted (B) and/or ceiling-hung directionals (C). Specify departments, personnel, restrooms and other special-use rooms with door-side identification signs (D) and/or projected room numbers (E).

Slatz provides a total sign program in one system.

Features

- Six faceplate heights
- Eight trimplate heights
- Five standard sidetrack options
- Custom panel sizes to match specific needs
- Tamper resistant
- Interchangeable plates
- Concealed mounting
- Single-panel or multi-panel construction
- Variable surface mounting
- Desktop adaptable
- Suspended or projected
- ADA compatible
- Unlimited configurations
